**Subject:** Bingham Update, April 1, 2010

Bob Lowman has asked me to send this out for him:

-----  
Friends and neighbors:

Attached you will find a letter to the N.C. Department of the Environment and Natural Resources that responds to the agency's request for additional information regarding problems at the wastewater treatment system at the Bingham Facility.

The DENR letter references several attachments, but we have not included them with this message because of their size. If you would like to receive these attachments, please let us know.

To update you on activities at the Bingham Facility, Clean Harbor has finished cleaning the impacted wastewater from our system so that we can resume our previous pump and haul operations to OWASA.

We have also rescheduled the site tours that had to be cancelled because of rain. These tours will be given Friday, April 9. I look forward to showing the site to you and answering your questions.

Sincerely,  
Bob Lowman
