Subject: UNC Bingham Facility
Facility I.D. 6800049, Permit No. 03036
Chapel Hill, Orange County, NC

Dear Ms. Puram:

I am writing in response to the June 20, 2013 invoice for the annual air permit for the subject facility. With removal of the incinerator from the facility in 2010 and following a conversation with Marshall Cannon of the Raleigh Regional Office during a site inspection in September 2012, we are no longer required to have an air permit for this facility. The University of North Carolina at Chapel Hill requests closure of the air permit.

Please contact me at (919) 843-5913 if you have any questions regarding this request. Thank you.

Sincerely,

Mary Beth Koza, M.B.A.
Director of Environment, Health, and Safety

SUBJECT: Rescission Request
Application No. 6800049.13A
Bingham Facility
Facility ID: 6800049, Chapel Hill, Orange County
Permit No. 03036R14

Dear Mary Beth Koza:

The Division of Air Quality has reviewed your letter received July 15, 2013 requesting rescission of Permit No. 03036R14.

Based on this information, the facility does qualify for exemption from permitting since the previously permitted incinerator has been removed and the only item remaining is a diesel-fired 600 kilowatt emergency generator. This engine is exempt from air permitting requirements under Rule 15A NCAC 2Q . 0903 so long as it burns less than 322,000 gallons of diesel fuel per year. Records must be maintained of this engine's annual fuel consumption to demonstrate ongoing applicability to this Rule.

Therefore, in accordance with your request, Air Quality Permit No. 03036R14 is hereby rescinded, effective the date of this letter. It should be noted that this exemption from permitting does not exempt Bingham Facility from complying with the applicable emission control standards.

Furthermore, should you decide to modify the processes such that the result is an increase of emissions of air pollutants, including toxic air pollutants, an Air Quality Permit may be

required and Bingham Facility should submit a permit application to this Office prior to such actions.

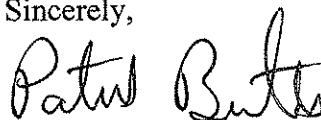

It should be noted that future regulations including Federal Maximum Achievable Control Technology (MACT) for hazardous air pollutants (HAP) may be promulgated and adopted by the Division which apply to this type of manufacturing facility. If so Bingham Facility may be required to apply for an Air Quality Permit at that date.

This exemption from the permitting requirement is based upon your statement that this facility has been and will be operated under the threshold levels as outlined in the Regulation. Please be advised that the operation of any air pollution emission sources which results in increased emissions in excess of the threshold levels specified in 15A NCAC 2Q.0102(b)(2) without an Air Quality Permit is a violation of 15A NCAC 2Q.0101, "Required Air Quality Permits." If this facility is required to obtain an Air Quality permit in the future because of increased emissions, each day of operation of the emission sources without an Air Quality Permit represents a separate violation. Such violations may be subject to enforcement action, including a civil penalty of up to \$25,000 per violation and/or injunctive relief, pursuant to NCGS 143-215.114A.

Please remember that you are required to submit all required periodic reports (e.g., quarterly, semiannual, annual, Annual Emissions Inventory, etc.) and, in particular, an Annual Compliance Certification for the partial period ending with the date of this rescission letter by the reporting deadline.

If you have any questions with reference to the above matter, please do not hesitate to contact Charles McEachern at (919) 791-4200.

Sincerely,

Patrick Butler, P.E.
Regional Air Quality Supervisor
