</table>
| Changing the Container: Removal of Old Container | Don PPE  
Keep the vacuum system running and do the following steps:  
1 - Begin removal by supporting the attached container with one hand and removing the retaining pins with the other hand  
2 - Tilt the collection container to the side to release it away from the vacuum  
3 - Pull down to release the collection container  
4 - Push the two red plugs into top of container, screw down recycle cap until O-ring seal is no longer visible and cap is flush against the container. | Pinch Hazards from placing snap caps on the container  
Possible Exposure Hazards – Mercury absorption through skin  
Spill Hazard from dropping the container before it is sealed | Be aware of your hand placement when removing the container  
Keep PPE on during the whole procedure  
Ensure the caps are firmly in place to avoid spilling the contents of the container |
| --- | --- | --- | --- |
| Changing the Container: Installing the New Container | Keep the vacuum system running and do the following steps:  
1 - Begin installation by checking the alignment of the fittings to the receiving holes on the main unit (It can only fit one way)  
2 - Gently insert the fittings into the receiver holes. Slightly rock the collection container and the O rings should seat into the upper unit receivers | Pinch Hazards  
Possible Exposure Hazards – Mercury inhalation or absorption | Be aware of hand placement when pushing the container to the main unit and when inserting retainer pins  
Wear proper PPE to prevent unnecessary exposure |
3 - Continue to push the container until it is fully sealed with the main unit.

4 - Reinsert the retaining pins into their holes until they are seated. This will lock the container in place.

5 - Fill out label information, “Date Installed” and “Next Change Due”.

6 - Check vacuum gauge reading to ensure it is adequate.

7 - Visually inspect the collection container weekly to check waste level. Log inspection date. Change container when waste reaches full line or annually, whichever occurs first.

| Recycling Process | Ensure the clear snap caps are firmly in place from the previous step.
Place the sealed full collection container into the recycle return box between the corrugated end caps.
Close the return shipping box and prepare for shipment. Follow enclosed shipping instruments including obtaining shipping label. Ship immediately, if possible. If applicable, dispose of the shipping box in the proper manner. | Possible Exposure Hazards – Mercury inhalation or absorption
Pinch Hazards from placing snap caps on the container | Continue to wear the necessary PPE throughout this process
Be conscious of hand placement when completing the necessary steps |
| Shipping is delayed, place in area under the control of waste generator, e.g. locked room. |

**Training**

| Employees must have hands on training in the proper use of this piece of equipment. | Supervisor is to fill out the ‘Supervisor Led Training Form’ and turn in the form to UNC-CH Environment, Health and Safety for documentation of proper training. |
