Re: Drinking Water Testing

Occupants of Coates Building,

Environment, Health and Safety has performed comprehensive drinking water testing for detectable lead in your building and has found 2 fixtures with detectable lead present. Below are the fixtures that were tested as well as the results.

<table>
<thead>
<tr>
<th>Sample Date</th>
<th>Location</th>
<th>Type</th>
<th>1st Sample (ppb)</th>
<th>2nd Sample (ppb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>10/27/2022</td>
<td>Room 207</td>
<td>drinking fountain</td>
<td>1.1</td>
<td>1.2</td>
</tr>
<tr>
<td>10/27/2022</td>
<td>Kitchen</td>
<td>sink</td>
<td>2.7</td>
<td></td>
</tr>
</tbody>
</table>

Highlighted gray areas in the 2nd Sample column indicate samples that were not collected. This applies primarily to ice makers (not capable of flushing) and sinks. EHS would have collected a 2nd sample if the 1st sample results were detectable.

The fixtures that showed detectable lead will be removed from service and further investigation into the cause will occur. Questions can be directed to the Environment, Health and Safety Department at 919-962-5507. Campuswide drinking water updates can also be seen at the EHS website and on the EHS Twitter account at @unc_ehs.

Thank you,
Catherine Brennan
