Re: Drinking Water Testing  

Occupants of Cogeneration Annex,

Environment, Health and Safety has performed comprehensive drinking water testing for detectable lead in your building and has found 1 fixture with detectable lead present. Below are the fixtures that were tested as well as the results. The fixture found with detectable lead is in bold below.

<table>
<thead>
<tr>
<th>Sample Date</th>
<th>Location</th>
<th>Type</th>
<th>1st Sample (ppb)</th>
<th>2nd Sample (ppb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>11/28/2022</td>
<td>In Break Room</td>
<td>Drinking Fountain</td>
<td>non-detect</td>
<td>non-detect</td>
</tr>
<tr>
<td>11/28/2022</td>
<td>In Break Room</td>
<td>Sink - Breakroom</td>
<td>7.7</td>
<td>non-detect</td>
</tr>
</tbody>
</table>

Highlighted gray areas in the 2nd Sample column indicate samples that were not collected. This applies primarily to ice makers (not capable of flushing) and sinks. EHS would have collected a 2nd sample if the 1st sample results were detectable.

The drinking water fixtures that showed no detectable lead will be placed back in service and signs will be removed. Questions can be directed to the Environment, Health and Safety Department at 919-962-5507. Campuswide drinking water updates can also be seen at the EHS website and on the EHS Twitter account at @unc_ehs.

Thank you,  
Catherine Brennan
